Full job description

Access Management Specialist

The initial brief:

Secure auth, azure AD, this project is supporting a rollout of ASD Essential 8, to distinguish between 2 streams, Privileged Access and multi factor authentication. Consultants must have good comms, as they will be required to communicate with team members who have a blend of senior and junior experience. this role could involve working on existing apps, upload pin to Biometrics, work on apps not integrated that are either on prem or web apps. they currently use secure auth and azure ad, but are aware this is difficult to source in the market, therefore will accept consultants who have worked on other tools that are able to transition. they have a set of requirements that are mature, to build a cyber security 2 tier system, privileged and multifactor authentication.

Note the below changes to the brief as of Thursday the 24th:

We're now looking for:

- Extensive hands on experience onboarding applications to Identity Providers using SAML, OIDC, WebAuthN etc
- Experience with Windows SSO, Multi-factor Authentication (MFA)
- Hands on delivery with SecureAuth platform a bonus, but experience on other similar platforms acceptable (Okta, Ping, Auth0, Oracle Access Manager, OpenSSO, etc)
